

Reflection on the LULAC Council 750 Website Project

Now that the LULAC Council 750 project is complete, my overall thoughts are mostly positive. As the main content and sub-designer on a team of three, I feel proud of the work we accomplished together. Each team member contributed their part, and our communication throughout the project made the entire process much smoother. Working with others who were reliable and collaborative helped me stay motivated and confident as we built the website.

One of the most interesting discoveries I made was how much goes into balancing the visual design with meaningful content. Choosing the right colors to fit LULAC's identity while keeping the site modern and accessible took a lot of experimenting. I also learned a great deal about myself—particularly how patient I can be when solving technical problems. WordPress crashing was definitely one of the biggest challenges we faced. Sometimes it slowed us down or caused us to redo work, but those moments taught me how important it is to save my progress, troubleshoot calmly, and reach out for help when needed.

Working on this project also strengthened my technical skills. I learned new features, tools, and functions within WordPress that I had never used before. Expanding my knowledge of the platform was one of the project's biggest benefits. I now feel more confident navigating WordPress and solving problems that come up during the design process.

Our teamwork was one of the project's greatest strengths. Communication was consistent, and we all checked in with each other, shared updates, and offered feedback. My teammates helped me become more comfortable with design choices, and I supported them by reviewing content, offering ideas, and helping wherever I could. I felt proud of the moments when I contributed strong content and design suggestions that helped the project move forward.

My personal strengths in this project were creativity, persistence, and my willingness to learn. I stayed committed even when technical issues were frustrating. However, I realized that I can still improve my time management and planning skills, especially when unexpected setbacks happen. If I were to approach a similar project again, I would start testing design elements and plugins earlier to avoid last-minute changes.

The moment I felt most proud was seeing how the final website came together with everyone's contributions blending into one unified design. It felt rewarding to see how our teamwork and communication paid off. I believe I could now teach others about the

problem-solving process we used, especially because the challenges and successes gave me a full understanding of how to build a WordPress site effectively.

Moving forward, I want to continue improving my confidence in my design decisions and stay proactive in group communication. I also plan to support future teammates with the same encouragement, reliability, and collaboration that this project taught me. Everything I learned—about teamwork, content development, design, and technical troubleshooting—will absolutely help me in future academic and professional projects.
